

SAFQUAL UK-Level 3 Diploma in Construction Safety

Overview:

The Level 3 – Diploma in Construction Safety is a qualification designed for professionals seeking to enhance their expertise in construction safety management. This comprehensive program provides participants with a thorough understanding of key concepts, principles, and practices related to managing safety in the construction industry. Through a blend of theoretical knowledge and practical applications, participants will develop the skills necessary to identify, assess, and control construction-related hazards, implement robust safety management systems, and ensure compliance with relevant regulations and standards. The course covers a wide range of topics, including risk assessment, incident investigation, emergency preparedness, and construction site safety, preparing participants to excel in diverse construction safety roles.

Who is this for ?

Site Supervisors & Foremen: Those responsible for safety management on construction sites.

Health & Safety Officers: Professionals overseeing safety policies and risk assessments.

Construction Managers & Engineers: Those managing operations and worker safety.

Contractors & Subcontractors: Individuals ensuring safe working conditions.

Anyone Looking to Work in Construction Safety: Ideal for those entering the field or upgrading their qualifications.

Assessment:

This qualification is evaluated using assignments and assessments. To receive this qualification, the learner must pass both tests with a certain percentage.

Duration:

The qualification has a recommended course duration of 6-12 months.

Note: However, the course duration may be increased to meet additional learning needs if required, but not reduced.

Validity :

The diploma is valid for life, but refresher courses are recommended every 3 years to stay updated with new regulations.
